

Skill Cortex V1

Workflow Document

Purpose: Skill Cortex is a webinar/course booking platform that allows users to select their department, choose a webinar and available slot, complete online payment through Razorpay, and receive automated confirmation and reminder notifications.

1. End-to-End Workflow

2. Detailed User Workflow

Step	Action	Expected Result
1	User Registration / Login	User creates an account or securely logs in.
2	Department Selection	User selects a department such as CSE, AI/ML or Data Science.
3	Webinar Selection	System displays courses/webinars relevant to the selected department.
4	Slot Selection	User selects an available date and time slot.
5	Booking Confirmation	System validates the slot and prepares the booking/payment process.
6	Razorpay Payment	User completes the online payment using Razorpay.
7	Payment Verification	Backend verifies the Razorpay payment before confirming the booking.
8	Notifications	User and admin receive payment/booking confirmation by email or SMS.
9	Daily Reminder	System automatically sends reminders based on the booked webinar slot.

Step	Action	Expected Result
10	Webinar Attendance	User attends the webinar at the selected date and time.

3. Department Selection

After authentication, the user selects the department that best matches their area of study or interest.

Example departments: CSE • AI/ML • Data Science • Other departments

The selected department is used to filter or organize the webinars shown to the user.

4. Webinar / Course Selection

The user browses available webinars or courses and selects the one they want to attend.

Information displayed	Example
Course/Webinar	Python Programming
Description	Python fundamentals and practical programming
Department	CSE / AI-ML / Data Science
Price	■999
Duration	As configured by admin
Available slots	Date + start time + end time

5. Slot Selection

The user selects an available date and time. The system checks the slot's capacity before allowing the booking to proceed.

Example: Python Webinar — 20 September 2026 — 10:00 AM to 11:00 AM

6. Payment Workflow

The payment process uses Razorpay. The backend creates the payment order, the user completes checkout, and the backend verifies the payment before the booking is confirmed.

Booking → Razorpay Order → Checkout → Payment → Backend Verification → PAID → CONFIRMED

Important: A frontend success response alone should not mark a booking as paid. The backend must verify the payment information.

7. Payment Status

Status	Meaning
PENDING	Payment has not yet been successfully completed/verified.
PAID	Payment has been successfully verified by the backend.
FAILED	Payment attempt was unsuccessful.
REFUNDED	Payment was refunded after a previously successful payment.

8. Notification Workflow

Once payment is successfully verified, Skill Cortex sends a confirmation notification to both the user and the administrator.

Recipient	Notification content
User	Webinar/course name, booked date/time, amount paid, booking confirmation and payment reference.
Admin	User details, webinar/course, booked slot, amount paid and payment status.

9. Daily Reminder Workflow

After a booking is confirmed and paid, the reminder service checks upcoming webinar slots and sends reminders according to the configured schedule.

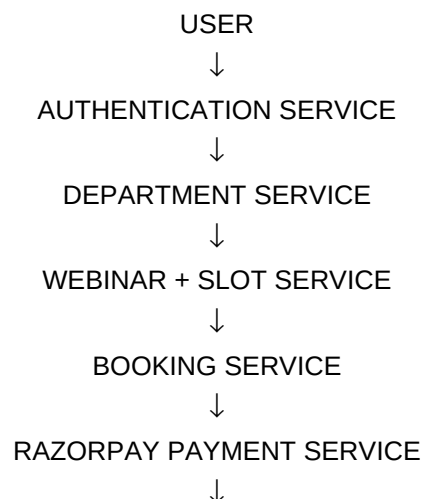

Example:

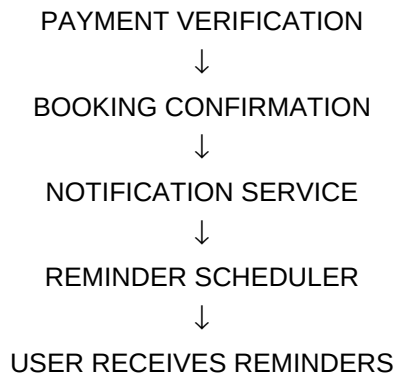

Time before webinar	Reminder
3 days before	Your Python webinar is in 3 days.
2 days before	Your Python webinar is in 2 days.
1 day before	Your Python webinar is tomorrow at 10:00 AM.
Day of webinar	Reminder: Your Python webinar starts today at 10:00 AM.

10. Admin Workflow

Admin action	Purpose
Manage departments	Create and maintain available departments.
Manage webinars	Create courses/webinars, descriptions, prices and status.
Manage slots	Create dates, times and capacity for each webinar.
View users	Review registered users and their department.
View bookings	Monitor user bookings and booking status.
View payments	Monitor verified Razorpay transactions and amounts.
View notifications	Track confirmation and reminder delivery status.

11. Complete System Interaction

12. V1 Completion Criteria

Skill Cortex V1 is complete when a user can register/login, select a department, choose a webinar, select an available date/time slot, pay through Razorpay, have the payment verified by the backend, receive confirmation notifications, and automatically receive reminders for the booked webinar. The admin must be able to manage webinars/slots and monitor users, bookings and payments.
